

# BIO-CIRCLE

## CASE STUDY SNAPSHOT

*"Reduces cleaning time by 94%!"*

RWR 80-KST

**INDUSTRY:** CNC Machining

**CLEANING APPLICATION:** The chips that are produced during the mechanical processing of CNC machining centres are usually wetted with oil or cooling lubricant. They are therefore centrifuged off with a chip centrifuge. The oil line of the chip centrifuge was quite clogged.

**BIO-CIRCLE CLEANING PROCESS:** RWR-80 KST connected to flush the oil line with **CB 100**

**THE RESULT:** The customer is thrilled. What took him at least a day to do with two people was done by the RWR within 1.5 hours. Using RWR means no dismantling is required - the pipes are simply connected into the existing system circuit.

CB 100

Ready to use

Unlabelled according to CLP-regulations

Optimal performance, protection of employees, reduction of environmental impact

VOC free

Suitable for use in the food industry
